

SudValve

Allproof's SudValve is a simple solution to a common problem.

Soap suds rising through a floor grate in a commercial or residential installation are unsightly and a slip hazard.

The unique SudValve system prevents this from happening, while still allowing 'grate' flow rates.

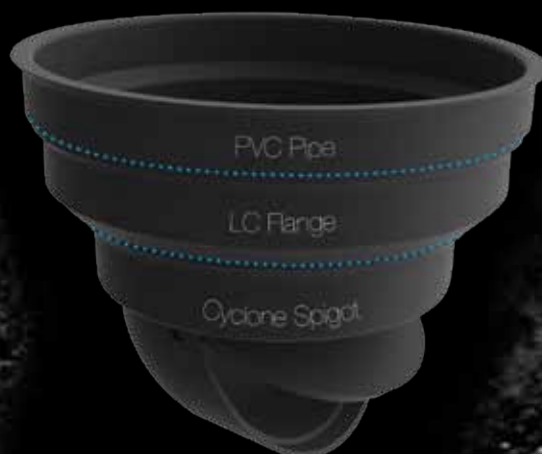

The benefits.

- Can be retrofit in a variety of 100mm and 80mm floor waste installations
- Stops soap suds rising through floor grate
- Reduces odours from dried out water traps
- Prevents insects from passing through grates
- Minimizes floor waste water noise in bathrooms

Installation is simple.

1. Trim flexible body if required to suit leak control flange spigot or Cyclone grate diameter.
2. Squash (if required) and push flexible body through floor grate.
3. The SudValve body should fit securely (with no gaps) in floor waste – close any gaps by pressing with your fingers.
4. Ensure SudValve is installed level with flap closed and that it opens freely.
5. Pour water through SudValve to test product is functioning properly.
