FIRE RETARDANT

SL-2 GROUP 2

SL-2 FIRE RETARDANT

group 2 fire retardant sheeting

Ampelite **SL-2** GROUP 2 FIRE RETARDANT sheeting has been specifically developed for Commercial and Industrial Structures requiring good natural lighting, combined with the need for fire retardant roofing and building materials.

- Surface Finish Properties have been tested to ISO 5660 and achieved a group number 2 performance in accordance with NZBC Verification Method C/VM2 Appendix.
- Premium Industrial fiberglass sheeting with the same UV resistant gel coated surface as 'Wonderglas GC'.
- Excellent long-term light transmission.
- Eliminates 99% of harmful ultra violet rays.
- Available in range of colours including clear or IR heat reducing sheeting and also as a solid colour sheet for corrosive environments.
- 25 year warranty protection for both water penetration and light transmission.

SL-2 GROUP 2 FIRE RETARDANT

SL-2 FIRE RETARDANT group 2 fire retardant sheeting

SL-2 GROUP 2 FIRE RETARDANT sheeting utilises the same highly UV resistant surface as Ampelite WonderGlas GC.

Like our WonderGlas GC, **SL-2 GROUP 2 FIRE RETARDANT** sheeting is protected by the same highly UV resistant Silmar 996 gel coat which is integral with the sheet and cannot delaminate. WonderGlas GC was tested at Allunga Queensland, through the Allunga Exposure Laboratory. Allunga is an independent laboratory that specializes in natural weather testing, and is well known in Australasia and overseas. All methods of testing are performed to strict Australian Standards. The WonderGlas GC technology was developed in the United States through BP Chemicals, and has been in the American market for in excess of 25 years and widely used throughout New Zealand since 1995.

SL-2 GROUP 2 FIRE RETARDANT sheeting is also available in our Permaglas range where the need for a more cost effective solution is required.

Suitable for the following profiles

SL-2 GROUP 2 FIRE RETARDANT sheeting is available to suit the commonly manufactured profiles in New Zealand and is manufactured to comply with AS/NZS4356.3:1994, part 2. **SL-2 GROUP 2 FIRE RETARDANT** is suitable for curved roof applications. Curved roof radius to suite 1800g/m2 corrugated and 5 Rib minimum radius 3.8 metres, 2400g/m2 corrugated and 5 Rib minimum radius 4.0 metres.

Specification

The Translucent Sheetting shall be Ampelite **SL-2 GROUP 2 FIRE RETARDANT** Industrial fiberglass sheeting, manufactured by Ampelite New Zealand Ltd, to comply with AS/NZS4256.3:1994, part 2. The gauge/weight of the sheet shall be mm/gsm and shall be manufactured to conform to the nominated profile and colour. Ampelite **SL-2 GROUP 2 FIRE RETARDANT** sheeting shall be installed in accordance with Ampelite fixing instructions and with AS/NZS 1562.3:1996, Design and installation of sheet roof and wall cladding, Part 3: Plastic, the requirements of the NZ building code and the NZ Metal Roofing Manufactures Association Code of Practice.

Installation

1. Pre-drill oversize holes to allow for expansion and contraction of sheet.
2. Use appropriate fixing assembly including a metal profiled washer and EPDM seal to ensure a firm, watertight sheet.
3. Apply a protective fibreglass strip between mesh and fibreglass sheet at each purlin.
4. For end laps, apply a self-adhesive closed cell foam strip directly over the purlin between the overlapping sheets.

Spanning Capacity

Series	1800/1.1mm	2400/1.4mm	3000/1.7mm
Corrugated	1000	1200	1300
6 Rib	1000	1200	1300
5 Rib	1200	1500	1700
Trimline	1200	1500	1700
SS900/Topspan	1600	1800	2000
LT7	1400	1700	1800
BB900	1400	1700	1900
DD400/BB400	1200	1400	1600

Available from

5. Install side stitching fasteners at a maximum of 450mm centres for profiles with a rib height less 30mm and 600mm centres for profiles with a rib height of more than 30mm. Ampelite recommend using a T17 coarse treaded self-drilling screw with the same metal profiled washer and seal being use on the primary fasteners.
6. Store sheets in a dry and fire safe area. Do not store heavy materials on sheets as they may fracture.
7. Pan fixing is recommended for cladding. Fixing shall occur in every pan at ends and every other at intermediate.

Ampelite sheeting matching clip-fixed deck profiles should be side lapped with overlaps on both sides. Sheet should be installed the same as positive fixed profiled roofing.

IMPORTANT: Ampelite sheeting should be installed by pre-drilling over size holes to allow for contraction. The basic calculation shall be 0.75mm per lineal metre, plus the shank diameter of the fastener.

EXAMPLE: 10 mtr sheet - $10 \times 0.75 + 4\text{mm}$ (fastener) = 11.5mm per drilled hole.

NOTE: Ampelite **SL-2 GROUP 2 FIRE RETARDANT** sheeting shall be installed in accordance with Ampelite fixing instructions and with AS/NZS 1562.3:1996, Design and installation of sheet roof and wall cladding, Part 3: Plastic, the requirements of the NZ building code and the NZ Metal Roofing Manufactures Association Code of Practice.

Physical Properties

Tensile strength	80MPA (min requirements 55 MPA)
Impact strength	8 Joules
Shear strength	90MPA
Modules of elasticity	550MPA
Compressive strength	135 MPA
Flexural strength	150MPA
Specific gravity	1.45
Thermal expansion	3.0×10^{-5} cm/C
Thermal conductivity	0158 watt/mC
Water adsorption	.2% in 24 hrs/26C
Service temperature Range	20C to 95C

Typical transmission levels (for series 1800/1.1mm)

Sheet Colour	Light Transmission
Clear	84%
Mist	78%
Opal	70%
Green	74%
Blue	60%
Grey	35%
